

EU SAE Dashboard

Download & Setup Guide

Overview

This guide explains how to download the EU Small Area Estimation Dashboard package from GitHub and set it up on your computer. The dashboard runs entirely on your local machine — **your data stays on your computer and is not shared with anyone.**

Preliminary release. The current version (**v2**) is an early, work-in-progress release marked **Pre-release** on GitHub. Contents and results may change without notice and should not be relied upon for official use.

Prerequisites

R 4.2.0 or later must be installed before running the dashboard.

- Download R from: <https://cran.r-project.org/>
- During installation, accept all default settings.

Step 1: Download the Package

Go to the releases page:

https://github.com/Noboyoshida227/EU_SAE_application_package/releases

- Open the release titled “**EU SAE Application Package v2 - preliminary release**”. Because it is marked **Pre-release**, it may not show the green “Latest” label — that is expected.
- Under **Assets**, click “**Source code (zip)**” to download.
- **Windows users:** download the **.zip** file.
- **Mac / Linux users:** download either **.zip** or **.tar.gz**.

Direct link to this release: https://github.com/Noboyoshida227/EU_SAE_application_package/releases/tag/v2

Step 2: Unblock the Downloaded File (Windows Only)

IMPORTANT: Do this **before** extracting the zip file. This prevents Windows from blocking the dashboard launcher.

- Right-click the downloaded **.zip** file.
- Click "**Properties**".
- At the bottom of the General tab, check the "**Unblock**" checkbox.
- Click "**OK**".

If you skip this step, Windows may show a security warning when you run the dashboard. If that happens, click "Run" on the warning (the file is safe), or right-click `Start_Dashboard.bat` → Properties → check Unblock → OK.

Step 3: Extract the Zip File

- Right-click the zip file → "**Extract All...**"
- Choose a location on your computer (e.g., your Documents folder).
- Click "**Extract**".

The extracted folder will be named after the release tag, e.g. `EU_SAE_application_package-2`.

Step 4: Add Your Data

- Open the extracted folder and locate the **data/** subfolder.
- Place your survey data files (in **.rds** format) into the **data/** folder.
- See the included User Guide (**EU_SAE_User_Guide_Dashboard.pptx**) for details on the expected data format.

Step 5: Launch the Dashboard

Windows

- Double-click **Start_Dashboard.bat**

Mac / Linux

- Open **Terminal**.
- Navigate to the extracted folder:

```
cd /path/to/EU_SAE_application_package-2
```

- Run:

```
bash Start_Dashboard.sh
```

First run: The dashboard will automatically install required R packages. This may take several minutes. Please be patient and ensure you have an internet connection.

Your default web browser will open automatically with the dashboard.

Troubleshooting

Problem	Solution
"R is not installed" error	Install R from https://cran.r-project.org/ and try again.
Security warning on Windows	See Step 2 above to unblock the file.
Package installation fails	Ensure you have an internet connection on the first run.
Dashboard does not open in browser	Open http://localhost:7777 manually in your browser.

Getting Updates

- Visit the releases page periodically to check for new versions:

```
https://github.com/Noboyoshida227/EU\_SAE\_application\_package/releases
```

- Download the latest version and repeat the steps above.
- Your data files will **not** be affected since they are on your local machine. However, you will need to copy them into the new version's **data/** folder.
