

EU SAE Application Package Download Instructions (v5.0.3)

Release page:

https://github.com/Noboyoshida227/EU_SAE_application_package/releases/tag/v5.0.3

Download and launch

1. Open the v5.0.3 GitHub release page above.
2. Under Assets, download Source code (zip).
3. Right-click the downloaded zip file and choose Extract All.
4. Open the extracted folder, for example EU_SAE_application_package-5.0.3.
5. On Windows, double-click Start_Dashboard.bat. On macOS or Linux, run Start_Dashboard.sh from a terminal.

Expected folder contents

```
EU_SAE_application_package-5.0.3/  
app.R  
Start_Dashboard.bat  
Start_Dashboard.sh  
install_packages.R  
R/  
scripts/  
data/  
instructions/  
Guidance note/  
www/
```

Keep the files together inside the extracted folder. Moving only app.R or only selected folders can prevent the dashboard from finding its supporting scripts, sample data, and documentation.

Input-file notes for v5.0.3

- Survey and auxiliary data must contain valid domain and year values for the selected analysis years. Blank or missing domains should be fixed before running the analysis.
- For ESRI shapefiles, upload one zip file containing the shapefile components, especially .shp, .shx, and .dbf. A standalone .shp file is usually not sufficient because the .dbf file normally contains the domain ID.
- The first launch checks required R packages. It installs missing packages and updates packages that are older than the dashboard minimum tested versions.
- The installer writes package_versions.local.csv for troubleshooting on the local computer. This file is generated locally and is not part of the shared release history.

Common checks before sharing results

Check	Why it matters
Domain mapping	Survey, auxiliary, population, and geometry domains must refer to the same target areas.
Year mapping	Selected years must exist in both survey and auxiliary data.
Geometry upload	Maps require a readable geometry file with a matching domain column.
Data readiness	Run the readiness check and resolve ERROR messages before launching the full pipeline.
