

EU SAE Dashboard

Download and Launch Instructions

A short guide for downloading EU_SAE_application_package from GitHub and opening the dashboard.

Before You Start

- Install R 4.2.0 or later from <https://cran.r-project.org/>. Accept the default installation settings. RStudio is optional.
- The dashboard runs locally on your computer. Downloading the package does not upload or share your data.

1. Download the Package from GitHub

Open the Releases page and download the latest release:

https://github.com/Noboyoshida227/EU_SAE_application_package/releases

The current build is a preliminary **v2 pre-release**, so enable “Show pre-releases” or scroll past any newer stable entry to find it. Under that release, download **Source code (zip)**. Alternatively, use the repository’s green **Code** →

Download ZIP button: https://github.com/Noboyoshida227/EU_SAE_application_package.

2. Unblock the ZIP File on Windows

Before extracting, right-click the downloaded .zip file, choose **Properties**, check **Unblock** if it appears, and click **OK**. If the Unblock checkbox does not appear, continue to the next step.

3. Extract the ZIP File

Right-click the ZIP file and choose **Extract All**. GitHub gives the extracted folder a suffix — for example **EU_SAE_application_package-main** (repository ZIP) or **EU_SAE_application_package-v2** (release ZIP). Open that folder. Inside you should see: Start_Dashboard.bat, Start_Dashboard.sh, app.R, install_packages.R, R/, scripts/, sample_data/, outputs/, instructions/, and www/.

4. Launch the Dashboard

Windows: double-click **Start_Dashboard.bat**. If Windows SmartScreen shows a “Windows protected your PC” warning, click **More info** → **Run anyway** — this appears only because the launcher was just downloaded.

Mac/Linux: open Terminal, navigate to the extracted folder, and run: `bash Start_Dashboard.sh`

Keep the launcher or terminal window open while using the dashboard. Closing it stops the app.

5. First Launch and Local URL

On first launch, the script installs missing R packages. This can take several minutes and requires an internet connection. The dashboard usually opens at <http://127.0.0.1:7777>. If the port is busy, use the next local URL printed in the launcher window, such as <http://127.0.0.1:7778>.

Troubleshooting

Problem	What to do
R is not installed	Install R 4.2.0 or later, then launch again.
Windows security warning	Unblock the ZIP, or on SmartScreen click More info → Run anyway.
Packages fail to install	Check internet access, then rerun Start_Dashboard.bat.
Browser does not open	Copy the local URL printed in the launcher window into your browser.
Can't find the release	Enable “Show pre-releases” on the Releases page, or use Code → Download ZIP.
Need app-use instructions	Open EU_SAE_User_Guide_Dashboard_v2.pptx in the instructions folder.
